the trimming pads is fixed after the programming of the EPROM instead of allowing these pads to remain free floating. Claim 1, for example, specifically claims digital input/output pads that have undergone digital trimming in order to obtain a predetermined output. Accordingly, by connecting the trimming pads to either the external power supply or external ground, the sensitivity of the device to extraneous electrical noise is reduced. None of the references of record is directed to the problem solved by the present invention nor do the references, taken alone or singly, suggest the solution to the problem disclosed by the applicant. Thus, the combination of references, even if proper, cannot yield the claimed invention.

Applicants respectfully request reconsideration and withdrawal of the rejection of the claims. In the event that the examiner maintains the rejection, applicants submit that the examiner should provide a detailed explanation of which elements of the references of record correspond the elements being claims, and where in the references is the motivation to combine the teachings of the references as proposed by the examiner. Absent such a showing, the rejection should be withdrawn.

Respectfully submitted,
